

FORTH AND TAY
DECOMMISSIONING

An end-to-end alliance

For our industry and environment

Forth and Tay Decommissioning offers an integrated, end-to-end service, purposely designed to create a decommissioning hub in Scotland. Through its leading process, decommissioning mind-set, and flexible customer-focussed service model, Forth and Tay Decommissioning will build a regional industry and more sustainable future for oil and gas.

Supporting UK Government and industry regulator goals through our new model for decommissioning.

Uniting experts and innovators

In our industry, the experience of long-established and trusted experts is invaluable. However, facing the challenges of today, innovators and entrepreneurial new thinking have become critical to ensuring a prosperous tomorrow. Forth and Tay Decommissioning brings together the sector's most experienced and brightest minds to deliver a value-added service that does exactly that.

A value-added vision

Realising the vision for such significant reductions in costs, time, and environmental impact is made possible through the power of collaboration. As a future-focussed alliance of established leaders and emerging innovators Forth and Tay Decommissioning works as one, with you, to safely deliver our unique value-added service model.

The home of UK decommissioning

By establishing a permanent UK base for end-to-end service delivery, Forth and Tay Decommissioning will successfully eliminate the high cost, effort and risk of relocating talent and equipment for traditional project-based decommissioning. The city of Dundee offers a highly-skilled local workforce, with access to major transport links for easy commuting and streamlined logistics, while the Port of Dundee's strategic location, ample dockside, and portcentric infrastructure make it the ideal domestic hub for decommissioning.

An end-to-end alliance

Together, Forth and Tay Decommissioning partners can manage every step of the decommissioning process from a single, strategically positioned hub at the Port of Dundee. From well abandonment and making safe, through topside and subsea removal, to onshore recycling and monitoring - each stage adheres to a rigorous planning process, with seamless project and facilities management ensuring reliable delivery and undeniable value.

Founding Partners

The seven collaborative organisations responsible for the realisation of Forth and Tay Decommissioning.

Innovating together with customers to plan, execute and transform projects and improve results for the oil and gas industry.

The sector leader in modernising hazardous waste management - providing sustainable, compliance-led solutions - Augean is proven in dealing with the UK's most hazardous wastes.

COES Caledonia (UK) Limited is a subsidiary of Chinese Ocean Engineering Shanghai (COES), which was founded in 1951, with globally recognised expertise in offshore installation and decommissioning, offshore renewables, salvage and wreck removal, subsea, diving and construction services, ocean towage, and anchor handling and supply.

FORTH PORTS

One of the UK's leading port service providers, adding value through its portcentric infrastructure and operations. Its Port of Dundee facility offers the ideal location, logistically and geographically, to establish the UK's dedicated hub for end-to end decommissioning.

ODS was formed in 2017 to provide offshore industries with innovative multipurpose, economical, safe and environmentally friendly heavy-lift solutions - supporting single topside lifts, jackets, subsea infrastructure and more.

John Lawrie Group is the largest metal recycler and exporter of processed metal in north and north-east Scotland. An experienced decommissioning supply chain member, it operates four SEPA-licensed waste treatment facilities close to quaysides – Aberdeen, Evanton near Invergordon, Lerwick, and Montrose – with a total annual licensed capacity of 285,000 tonnes.

A circular economy advocate and 2017 VIBES award winner, the firm is expanding its operations in 2020 by opening a new quayside metal recycling and decommissioning facility in Dundee.

Using its own bespoke marine and land-based assets together with its in-house expertise, Well-safe offers fully integrated "Tier 1" well abandonment services.

Supporting Partners

The future-focussed partners supporting the vision of Forth and Tay Decommissioning and delivery of its services.

A world-leading classification society, offering a wide range of value-added Marine and Offshore services designed to help clients address industry specific risks and challenges.

An expert oil and gas industry service provider, specialising in asset recovery and reuse, equipment acquisition and disposal, heavy lifting, and more.

A leading UK publishing & media house and a Dundonian family enterprise, supporting a prosperous future for the people and organisations of Dundee and beyond, since 1905.

Robertson Recycling has a fully licensed, SEPA-approved decommissioning site at the Port of Dundee and offers the easy sale and purchase of high quality ferrous and non-ferrous scrap metals.

Committed to supporting and investing in the future of the people, infrastructure, businesses and industries of Dundee.

Meeting the demand for integrated engineering services with an unprecedented offering in turnkey services to both UK and global markets, from initial design, through to lifecycle management of critical assets.

“Our vision is to aggregate discrete projects into campaigns and then campaigns into hubs. Only by doing this are we able to create a sustainable, profitable and low cost decommissioning industry in Dundee, and better serve the future needs of our industry in Scotland.”

Callum Falconer, Chief Executive,
